

PRODUCT REVIEW BY SAM WHITEHEAD

THE DAY TRIPPER

Windzone's wonderful tool is no hallucination

DON'T BE FOOLED. THIS INGENUOUS, JAM-PACKED COMBINATION tool kit may be called the Day Tripper, but you might just as easily holster the sucker to your belt (always a styling look) and confidently hit the road for weeks or months — possibly even years. Truly self-reliant bikers could even use the Day Tripper's razor-sharp knife blade to impale small animals and thus provide meat to be roasted over a fire set ablaze with tinder cut by the tool's wood saw.

The possibilities really are endless. Seriously, whether or not you are a hunter-gatherer, you'll find the compact Day Tripper quite a remarkable piece. Created by the wizards at Windzone, the extremely versatile Day Tripper (aka the Great Escape) was made to tackle "over 95% of all motorcycle repairs, regardless of make or model." The press materials further boast that this product is "so functional that you'll run out of problems before it runs out of solutions." That's how many tools can be found in this kit. There's an adjustable wrench, needlenose pliers, file, wire cutter/stripper, bit driver, well over

32 bits, and so much more. It's all stainless steel, and it's guaranteed forever. And it's only \$35. And, and, and ... You get the idea.

Fortunately, I haven't yet had to rely on the full glory of the Day Tripper to help me out of any annoying roadside jams. However, when those inevitable moments of trouble arise, I'll just reach for my hip, draw my Day Tripper, and fire away. MacGyver never had it so good. AIM
